Answers to FAQs

- Actual procedure takes under 30 minutes.
- Procedure causes permanent sterilization. The procedure can be performed using NITROUS OXIDE (laughing gas), which is extremely effective in relieving anxiety and providing pain relief.
- A local anesthetic is administered to the skin at the beginning of the procedure.
- Patient is not considered sterile until his semen analysis shows no sperm.
- There is no change to sexual function, including erection and orgasm.
- There is no change to testosterone level or sex drive.
- There are no sutures that will need to be removed.
- Most patients return to normal activity within 7 days.
- Most patients who don't occupationally perform heavy lifting return to work in 1-2 days.

Vasectomy

Permanent Birth Control for Men

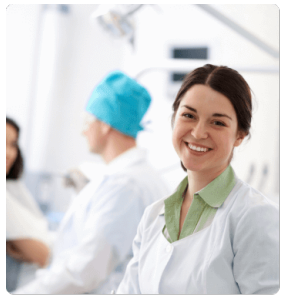

NORTH IDAHO
urology

North Idaho Urology has been serving the Northern Panhandle for almost 50 years.

North Idaho Urology

North Idaho Urology has been serving the Northern Panhandle of Idaho for almost 50 years. Our mission is to provide high quality urologic care to our patients in a compassionate manner. North Idaho Urology offers exceptional care and services for our patients across the Inland Northwest. Although we offer full service urological care, vasectomies are our most common procedure, giving us the reputation as the most skilled, efficient and painless office in North Idaho for a vasectomy.

Our urologists are surgeons who specialize in the genitourinary tract, which includes the kidneys, bladder, and genitals. A urologist is a physician and specialty surgeon who has specifically studied and received operative training for the various contents of the male genitalia as a requirement for their credentials. With such a delicate area, it is important to follow specific surgical principals to have a more delicate, comfortable procedure with minimal complications.

Pre-Op and Post-Op Recommendations

Pre-Op

- Wear comfortable loose clothing and briefs or boxer-briefs are preferred. No need to shave vasectomy area.

Post-Op

- Cold packs are advised to reduce swelling and bruising.
- You may resume normal activities when you feel up to it but it is advised not to lift any heavy items for 7 days.
- Another form of birth control must be used until a zero sperm count is confirmed by sperm analysis.
